WHY FIBER OPTIC?

SmartAVI has created a full line of fiber optic extender products, understanding that this technology is superior to traditional cabling. We use the highest quality fiber optic components for our products.

Fiber optic cables are:

- Capable of transmitting over very long distances with no signal loss.
- Immune to electromagnetic interference. In situations where there is considerable interference, fiber optic cabling is the only solution.
- Much more secure because they cannot be easily tapped. For this reason, military and law enforcement agencies use fiber optic cables for the transmission of sensitive data.
- Relatively inexpensive and small enough to be routed through small spaces.

We use only the highest quality fiber optic transceivers.

MEDICAL FIELD

In the medical field where sensitive electronic devices are used, isolating workstation computers can be a matter of safety. The FDX-S2U allows the workstation computers to be housed in a central location, away from sensitive devices.

INDUSTRIAL WORK AREAS

In industrial work areas that may be too harsh for a workstation computer, the FDX-S2U can consolidate the computers into a safe location.

SECURE COMPUTING

When it comes to security, the FDX-S2U is an excellent deployment option. With the FDX-S2U, devices can be centralized and secured from public access. This, combined with the intrinsic security of fiber optic cable, make the FDX-S2U one of the most secure KVM solutions available.

INFORMATION KIOSKS/DISPLAYS

As with most information booths and kiosks, there is a risk of damage or theft. The FDX-S2U is the best way to secure computer hardware, by consolidating it to a secure location away from public access.

FILM/MUSIC RECORDING STUDIOS

When recording with sensitive cameras and microphones, computers are often too noisy to be used in the immediate vicinity. The FDX-S2U isolates the computers into another room, maintaining the silence that recording artists require.
