SmartCommander Switch

Remote Switch Control System

Control RS-232 Compliant Switches Remotely

The SmartCommander system brings the control of a matrix switch to remote workstations, eliminating the need to control the switch locally. Each workstation is equipped with a simple switch panel, allowing the user to select the desired output with the press of a button. The system also allows for a master to control the switching functions, overriding the remote control if necessary. The SmartCommander system can be used with any of SmartAVI's RS-232 compliant matrix switches.
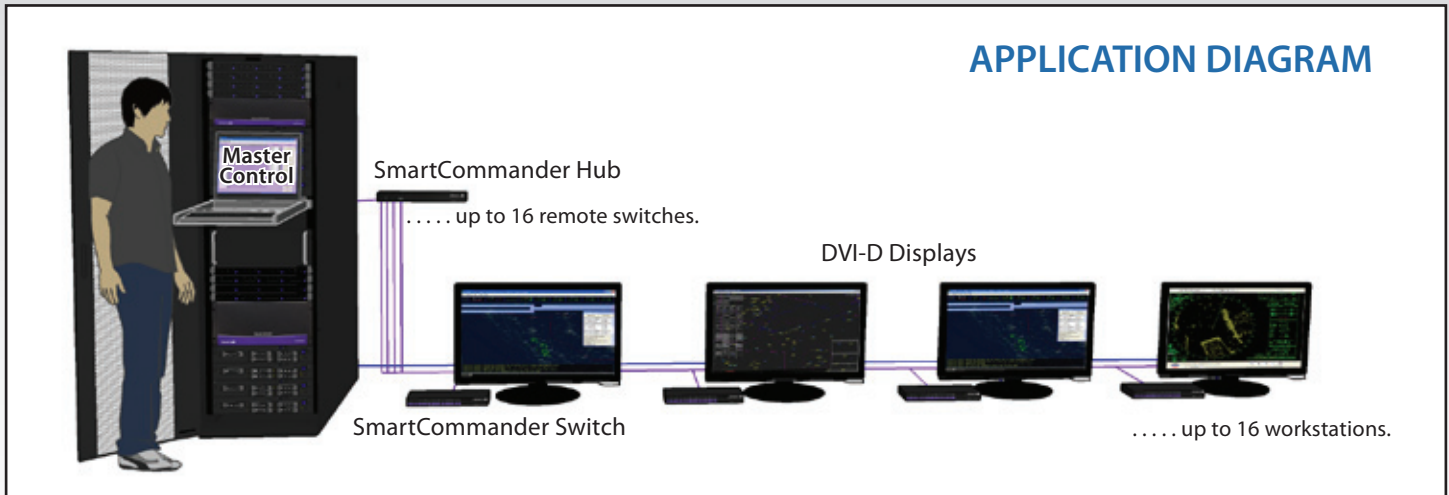

FEATURES

- Control any SmartAVI RS-232 Compliant Matrix Switch
- Local Master Control to Override Remotes
- Compatible With all Major KVM Switches
- Supports Mac, PC, and Linux DVI
- Rack Mountable Solution
- Plug-and-play
